SELENITE CYSTINE BROTH (7283)

Intended Use
Selenite Cystine Broth is used for the selective enrichment of Salmonella species in a laboratory setting. Selenite Cystine Broth is not intended for use in the diagnosis of disease or other conditions in humans.

Product Summary and Explanation
The growth and isolation of Salmonella in food and other samples can be suppressed from food-processing procedures including exposure to low and or high temperatures, drying, radiation, preservatives, and sanitizers. Along with the harsh processing procedures, Salmonella organisms may be competing with other bacteria in the same sample. Primary and secondary (selective) enrichment media are used to nurture any injured or stressed cells, along with inhibiting nuisance organisms.

Selenite Cystine Broth is based upon the formula of Selenite Broth described by Leifson, with the addition of cystine. The FDA, Bacteriological Analytical Manual incorporate Selenite Cystine Broth as a pre-enrichment medium for detecting Salmonella in food materials. Selenite Cystine Broth is recommended by AOAC, USP, and APHA as a selective enrichment medium for Salmonella spp., while inhibiting the growth of other Gram-negative bacilli.

Principles of the Procedure
Enzymatic Digest of Casein and Enzymatic Digest of Animal Tissue are used as nitrogen and vitamin sources in Selenite Cystine Broth. Lactose is the carbohydrate and Disodium Phosphate is the buffer. Sodium Selenite is the selective agent against Gram-positive bacteria and most enteric Gram-negative bacilli. L-Cystine is a reducing agent.

Formula/Liter
Enzymatic Digest of Casein ................................................. 2.5 g
Enzymatic Digest of Animal Tissue ..................................... 2.5 g
Lactose ............................................................................. 4 g
Sodium Phosphate ............................................................. 10 g
Sodium Selenite ................................................................. 4 g
L-Cystine ......................................................................... 0.01 g
Final pH: 7.0 ± 0.2 at 25°C
Formula may be adjusted and/or supplemented as required to meet performance specifications.

Precautions
1. For Laboratory Use Only.
2. Harmful. Harmful by inhalation and if swallowed. Danger of cumulative effects. Irritating to respiratory system.

Directions
1. Dissolve 23 g of the medium in one liter of purified water.
2. Heat to boiling to completely dissolve the medium.
3. DO NOT AUTOCLAVE. Use immediately.

Quality Control Specifications
Dehydrated Appearance: Powder is homogeneous, free flowing, and off-white to white.

Prepared Appearance: Prepared medium is clear to slightly opalescent and very pale yellow.
Expected Cultural Response: Cultural response is exhibited on MacConkey Agar after enrichment in Selenite Cystine Broth at 35 ± 2°C for 18 – 24 hours. MacConkey Agar was incubated at 35 ± 2°C and examined for growth at 18 – 24 hours.

The organisms listed are the minimum that should be performed for quality control testing.

Test Procedure 3,4
1. Prepare food sample following the recommended procedure.
2. Inoculate into recommended pre-enrichment broth.
3. Transfer 1 mL of mixture to 10 mL Selenite Cystine Broth and to 10 mL Tetrathionate Broth.
4. Incubate at 35°C for 24 ± 2 hours.
5. Mix and streak 3 mm loopful (10 µL) of sample from both broths onto Bismuth Sulfite Agar, Xylose Lysine Desoxycholate Agar, Hektoen Enteric Agar or MacConkey Agar.
6. Examine plates for the presence of colonies that are typical for Salmonella spp.

Results
Refer to references for the characteristic growth of Salmonella spp. on appropriate media formulations.

Storage
Store sealed container 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.

Expiration
Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if the appearance has changed from the original color.

Limitation of the Procedure
Due to nutritional variation, some strains may be encountered that grow poorly or fail to grow on this medium.

Packaging
Selenite Cystine Broth  Code No.  7283A  500 g
                                    7283B  2 kg
                                    7283C  10 kg
