**R2A AGAR (7390)**

**Intended Use**  
R2A Agar is used for the enumeration and cultivation of bacteria from potable water in a laboratory setting. R2A Agar is not intended for use in the diagnosis of disease or other conditions in humans.

**Product Summary and Explanation**  
R2A Agar was developed by Reasoner and Geldreich\(^1\) for bacterial plate counts of treated potable water. R2A Agar is a low nutrient medium, and in combination with a lower incubation temperature and longer incubation time, stimulates the growth of stressed and chlorine-tolerant bacteria.\(^2\) Nutritionally rich media support the growth of fast-growing bacteria, and may suppress slow growing or stressed bacteria found in treated water. When compared with Tryptone Glucose Yeast Extract Agar or Standard Methods Agar, R2A Agar reported improved recovery of stress and chlorine-tolerant bacteria from drinking water systems.\(^2,3,4\)

R2A Agar is recommended in standard methods for pour plate, spread plate, and membrane filter methods for heterotrophic plate counts.\(^5\)

**Principles of the Procedure**  
Enzymatic Digest of Casein, Enzymatic Digest of Animal Tissue, and Acid Hydrolysate of Casein provide nitrogen, carbon and minerals in R2A Agar. Yeast Extract is a source of vitamins and trace elements. Dextrose serves as a carbon source in the formula. Soluble Starch aids in the recovery of injured organisms by absorbing toxic metabolic by-products. Dipotassium Phosphate is used to balance the pH, and Magnesium Sulfate Heptahydrate is a source of divalent cations and sulfate. Sodium Pyruvate increases the recovery of stressed cells. Agar is the solidifying agent.

Final pH: 7.2 ± 0.2 at 25°C  
Formula may be adjusted and/or supplemented as required to meet performance specifications.

**Precautions**  
1. For Laboratory Use Only.  
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

**Directions**  
1. Suspend 18.2 g of the medium in one liter of purified water.  
2. Heat with frequent agitation and boil for one minute to completely dissolve the medium.  
3. Autoclave at 121°C for 15 minutes.

**Quality Control Specifications**  
Dehydrated Appearance: Powder is homogeneous, free flowing and light beige to beige.
**Prepared Appearance:** Prepared medium is clear to slightly hazy and light beige.

**Expected Cultural Response:** Cultural response on R2A Agar incubated aerobically at 35 ± 2°C and examined for growth at 40 to 72 hours incubation.

<td>Poor to Good</td>
</tr>
<tr>
<td>Escherichia coli ATCC® 25922</td>
<td>10 - 300</td>
<td>Fair to Excellent</td>
</tr>
<tr>
<td>Staphylococcus aureus ATCC® 25923</td>
<td>10 - 300</td>
<td>Poor to Good</td>
</tr>
</tbody>
</table>

The organisms listed are the minimum that should be used for quality control testing.

**Test Procedure**

1. Prepare test dilutions for heterotrophic plate count.
2. Plate the test sample and dilutions by the spread plate, pour plate, or membrane filter method. Do not exceed 1 mL of sample or dilution per spread or pour plate. The volume of test sample to be filtered for the membrane filter technique will vary.
3. Maintain proper humidity during prolonged incubation:

</thead>
<tbody>
<tr>
<td>35°C</td>
<td>72 hours</td>
<td>5 – 7 days</td>
</tr>
<tr>
<td>20 or 28°C</td>
<td>5 days</td>
<td>7 days</td>
</tr>
</tbody>
</table>

**Results**

Count colonies on spread or pour plates demonstrating 30 - 300 colonies per plate or 20 - 200 colonies when using the membrane filter method. Compute bacterial count per mL of sample by multiplying the average number of colonies per plate by the reciprocal of the appropriate dilution.

Report counts as colony forming units (CFU) per mL and report variables of incubation such as temperature and length of time.

**Storage**

Store sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place the container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.

**Expiration**

Refer to expiration date stamped on the container. The dehydrated medium should be discarded if it is not free flowing, or if the medium has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

**Limitations of the Procedure**

1. Due to varying nutritional requirements, some strains may be encountered that grow poorly or fail to grow on this medium.
2. R2A Agar is intended for use only with treated potable water.
3. Use of the pour plate method is discouraged because recovery of stressed bacteria may be compromised by the heat shock (44-46°C) and low oxygen tension that are part of the procedure.\(^6,7\)
4. Incubation time longer than indicated above may be necessary to recover additional slow-growing bacteria.
Packaging
R2A Agar       Code No.       7390A       500 g
                7390B       2 kg
                7390C       10 kg
