Intended Use

Fraser Broth Base is used with ferric ammonium citrate for the selective enrichment of *Listeria* species in a laboratory setting. Fraser Broth Base is not intended for use in the diagnosis of disease or other conditions in humans.

Product Summary and Explanation

*Listeria monocytogenes*, described in 1926 by Murray, Webb and Swann, is a widespread problem in food industries.\(^1\) Epidemiological evidence from outbreaks of listeriosis indicate the principle route of transmission is via the consumption of foodstuffs contaminated with *Listeria monocytogenes*.\(^3\) Implicated vehicles of transmission include turkey frankfurters, coleslaw, pasteurized milk, Mexican style cheese and pate.\(^4\) *Listeria* species are ubiquitous in nature, present in a wide range of unprocessed foods and in soil, sewage, and river waste.\(^5\)

Fraser Broth Base is based on the formulation of Fraser and Sperber.\(^6\) This medium is used in rapid detection of *Listeria* from food\(^7\)\(^8\) and environmental samples. *Listeria* species grow over a pH range of 5.0 - 9.6, and can survive in food products with pH levels outside these parameters.\(^9\) Identification of *Listeria* is based on successful isolation of the organism, biochemical characterization, and serological confirmation.

Principles of the Procedure

Enzymatic Digest of Casein, Enzymatic Digest of Animal Tissue, Beef Extract, and Yeast Extract provide nitrogen, vitamins, and minerals in Fraser Broth Base. The Phosphates are the buffering agents. Sodium Chloride maintains osmotic balance. Differentiation is aided by including Ferric Ammonium Citrate in the final medium. Since all *Listeria* species hydrolyze esculin, the addition of ferric ions to the medium will detect the reaction. A blackening of the medium by cultures containing esculin hydrolyzing bacteria is the result of formation of 6,7-dihydroxycoumarin that reacts with ferric ions.\(^6\) Selectivity is provided by the presence of Lithium Chloride, Nalidixic Acid, and Acriflavin in the formula. The high salt tolerance of *Listeria* is used to inhibit growth of enterococci.

### Formula / Liter

Formula may be adjusted and/or supplemented as required to meet performance specifications.

Precautions

1. For Laboratory Use Only.
2. HARMFUL. Harmful if swallowed, inhaled, or absorbed through the skin. Irritating to eyes, skin, and respiratory system. May cause central nervous system effects.

Directions

1. Dissolve 55 g of the medium in one liter of purified water.
2. Mix thoroughly.
3. Autoclave at 121°C for 15 minutes.
4. Aseptically add 10 mL of Fraser Broth Base Supplement (7984).

Quality Control Specifications

Dehydrated Appearance: Powder is homogeneous, free flowing, and light to medium beige.
Prepared Appearance: Prepared medium is golden yellow with an amber opalescent top, clear to slight hazy, with none to light precipitate.

Expected Cultural Response: Cultural response in Fraser Broth Base incubated aerobically at 35 ± 2°C and examined for growth after 18 - 48 hours incubation.

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure
To isolate *Listeria monocytogenes*, refer to appropriate procedures recommended by U.S.D.A. and FDA/BAM Methods.

Results
For further identification and confirmation of *Listeria* species, consult appropriate references. Rapid slide and macroscopic tube tests can be used for definitive serological identification.

Storage
Store sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.

Expiration
Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure
Due to nutritional variation, some strains may grow poorly or fail to grow on this medium.
