**Intended Use**
EE Broth, Mossel is used for the cultivation and enrichment of *Enterobacteriaceae* in food in a laboratory setting. EE Broth, Mossel is not intended for use in the diagnosis of disease or other conditions in humans. EE Broth Mossel, conforms to Harmonized USP/EP/JP Requirements.\(^1,2,3\)

**Product Summary and Explanation**
EE Broth, Mossel was developed by Mossel, Visser, and Cornelissen to facilitate the growth of *Enterobacteriaceae*.\(^4\) This medium contains dextrose to enhance the growth of *E. coli* and *Salmonella* spp., particularly in food samples. Nuisance organisms are suppressed by the addition of Ox Bile and Brilliant Green.

EE Broth, Mossel is used as an enrichment broth, providing a rich environment for the recovery of damaged or injured cells. *Enterobacteriaceae* organisms can be injured in food-processing procedures, including exposure to low temperature, sub-marginal heat, drying, radiation, preservatives, or sanitizers.\(^5\) The enumeration of *Enterobacteriaceae* is an important measure of the sanitary condition of food. Although injured cells may not form colonies on selective media, they can cause infection if ingested.\(^6\)

EE Broth, Mossel complies with the specifications of the Eiprodukte-Verordnung (German Egg Product Regulations)\(^7\) and conforms to Harmonized United States Pharmacopoeia (USP), European Pharmacopoeia (EU), and Japanese Pharmacopoeia (JP).\(^1,2,3\)

**Principles of the Procedure**
Enzymatic Digest of Gelatin provides nitrogen, vitamins, and amino acids in EE Broth, Mossel. Dextrose is the carbon source to enhance organism growth. Desiccated Ox Bile and Brilliant Green are the selective agents against Gram-positive bacteria, particularly bacilli and fecal streptococci. Sodium Phosphate and Potassium Phosphate are strong buffering agents.

**Formula / Liter**
Desiccated Ox Bile ................................................................. 20 g
Enzymatic Digest of Gelatin .................................................. 10 g
Sodium Phosphate, Dibasic .................................................... 8 g
Dextrose .................................................................................. 5 g
Potassium Phosphate, Monobasic ........................................... 2 g
Brilliant Green ........................................................................ 0.015 g
Final pH: 7.2 ± 0.2 at 25°C
Formula may be adjusted and/or supplemented as required to meet performance specifications.

**Precautions**
1. For Laboratory Use Only.
2. IRRITANT. Irritating to eyes, respiratory system, and skin. May be harmful if swallowed.

**Directions**
1. Suspend 45 g of the medium in one liter of purified water.
2. Heat at 100°C for 30 minutes to completely dissolve the medium.
3. Cool rapidly in cold water.
4. DO NOT AUTOCLAVE.

**Quality Control Specifications**
**Dehydrated Appearance:** Powder is homogeneous, free-flowing, and light beige to light green.

**Prepared Appearance:** Prepared medium is clear to slightly hazy with no to trace precipitate and green to dark green in color.

The organisms listed are the minimum that should be used for quality control testing.

**Test Procedure**
1. Inoculate prepared EE Broth, Mossel with approximately 10 g of homogenized food or other material to be tested.
2. Shake the inoculated medium thoroughly for a few seconds to mix well.
3. Incubate for a total of 18 - 48 hours at 30 - 35°C. Shake tubes or flasks after the first 3 hours of incubation.
4. Streak a loopful of the incubated enrichment culture of EE Broth, Mossel onto a prepared selective medium.
5. Incubate the plates for 18 - 24 hours at 30 - 35°C. Examine the incubated medium for the presence of the target organism.

**Results**
Examine EE Broth, Mossel for growth, indicated by turbidity.

**Storage**
Store sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light.

**Expiration**
Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if the appearance has changed from the original color.

**Limitation of the Procedure**
Some strains may be encountered that grow poorly or fail to grow on this medium.
