

Mycotoxin Solutions

Choose Neogen

NEW!

Neogen Certified Reference Material

Ensure your lab is testing effectively

Neogen's Certified Reference Material (CRM) gives quality assurance personnel and supervisors a way to internally evaluate mycotoxin testing procedures.

Neogen's CRM is naturally-contaminated with toxins like aflatoxin, DON or fumonisin to provide the most realistic testing scenario possible. You can choose from low, medium, high and undetectable contamination levels.

Use Neogen's CRM as part of a training or internal certification program to quickly and confidentially evaluate **sampling**, **extraction** and **testing techniques**. These techniques are crucial in preventing false positives or negatives in mycotoxin testing.

Suggested Evaluation Protocol (4 times a year):

- Have technicians perform mycotoxin testing protocol on samples of CRM
- Compare individual results to certified level contained in CRM
- If needed, improve testing protocol or offer additional training to individuals

Also from Neogen, the Check Sample Program

Verify your testing protocol blindly and compare your results to those of other labs with Neogen's Check Sample Program for aflatoxin or DON.

Participants in the Check Sample Program test blind samples quarterly. After all the results are received, Neogen sends participants a compilation report with each lab identified with a confidential number.

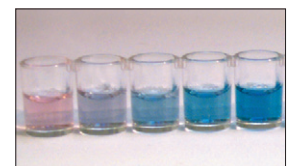

Contact your Neogen sales representative for more information and availability
